News Release 09-30

Drill Hole 14B Intercepts 70.9 meters (232.6 feet) of 10.7 g/T (0.311 oz/t) Gold, Including 38.7 meters (126.9 feet) of 19.0 g/T (0.555 oz/t) Gold. 92.2 meters (302.6 feet) to 203 meters (666.0 feet) Assay Results Pending

October 26, 2009

Vancouver, BC -- International Wayside Gold Mines Ltd. ("Wayside", the "Company") announced today that it has completed an 18 hole in-fill diamond drill program in the Bonanza Ledge Zone at Barkerville Mountain, designed by Mintec Inc. Assay results for drill holes BC09-10, BC09-13, BC09-14, BC09-14B (partial: 92.2 of 203 meters have been assayed to date), BC09-15, BC09-16 and BC09-17 were recently received (see Table 1).

Highlights of the drill results include:

Hole BC09-14B: 70.9 meters (232.6 feet) of 10.7 g/T (0.311 oz/t) gold

- Including: 38.7 meters (126.9 feet) of 19.0 g/T (0.555 oz/t) gold
- 92.2 meters (302.6 feet) to 203 meters (666.0 feet) Assay Results Pending

Drilling of BC09-14B was recently completed to a depth of 203 meters (666.0 feet) and the core samples from pending assays were split and sent to Eco Tech Laboratory Ltd. for analysis on October 24, 2009 and will be released when received. BC09-14B was drilled 50.5 meters (165.6 feet) southeast of BC09-12 which returned assays of 84.4 meters (277 feet) of 16.5 g/T (0.481 oz/t) gold (see News Release October 7, 2009). Assay results have been received to 92.2 meters (302.6 feet). BC09-14B marks the beginning of a new phase of drilling targeting Bonanza Ledge mineralization at depth and below the existing NI43-101 proven reserves, as reported in the Company's Pre-feasibility study September 10, 2009 and filed on SEDAR October 23, 2009.

Drill hole BC09-14 was stopped at 87 feet in a fault zone which required its re-drilling as BC09-14B. Drill hole BC09-14B was cased to 21.3 meters (70 feet) and samples were not taken within the cased portion of the hole.

J. Frank Callaghan, President and CEO stated, "We are excited to start a new phase of drilling targeting Bonanza Ledge style mineralization at depth, below the proposed Bonanza Ledge open pit gold mine and along strike of the Bonanza Ledge trend. This next phase of Bonanza Ledge drilling will begin as the Company's consultants and geologists interpret the data

gathered from the infill drill program. The Company is currently drilling the Butts Zone, 2 km northwest of the Bonanza Ledge in the Cariboo Gold Quartz and Island Mountain mine trends”.

TABLE 1: SUMMARY OF ASSAYS OF DDH BC09-10, 13 THROUGH 17

#	Drill Hole	From	To	Width	Gold	
		Feet		Feet	g/T	Oz/t

The technical information in this News Release has been reviewed and approved by Chief Geologist Jim Yin, PhD, P.Ge, a qualified person as defined in National Instrument 43-101. The gold values presented have been derived from assay data received from Eco Tech Laboratory Ltd. in Kamloops, B.C., using fire assay with an AA (atomic absorption) finish.

On Behalf of the Board of Directors,

"J. Frank Callaghan"

J. Frank Callaghan
President, CEO
